BRIEFING NOTE · PROPERTY PROMOTERS & HOSTS

Turn apartments into demand engines — with *creators* and Mobile Money

A short presentation for property promoters: how Isisel helps you fill stays, recruit influencers with promo codes, and open African guest payment rails.

Read low → high. Start with the console and guest flow, then the **influencer commission program**, then the reason the platform exists: **Mobile Money for an intra-African short-term rental economy**.

01 CONSOLE

02 GUEST FLOW

03 CREATORS

04 MOBILE MONEY

From useful today → category-defining

Use this ladder in the room. Each rung is stronger than the last. End on Mobile Money — that is why Isisel was built.

LOW

A serious place for African stays

Your apartments sit in a marketplace designed for the continent — not buried as leftover inventory on a global board. Guests find **place**, not noise.

LOW+

You stay in control

Guests **request dates**. You approve. WhatsApp keeps hospitality human. Nothing books itself behind your back.

MID

One host console

Listings, calendar, reservations, arrivals and departures — and Creators — in one place so promoters can run inventory without spreadsheet chaos.

HIGH

Influencer program that pays for content

Assign a creator to a specific apartment. Issue a promo code. Set their **commission %** and the **guest discount %**. Pause anytime. They earn when their code books — so they keep posting for that stay.

PEAK

Mobile Money opens the African guest market

The founding reason for Isisel: payment rails that meet how Africans already pay — Wave, Orange Money, MTN MoMo, Moov, plus cards — so short-term rentals can circulate **inside Africa**, not only via foreign cards.

Presenter tip: Spend the least time on “another listing site.” Spend the most on creators + Mobile Money — those are the promoter’s growth levers.

What Isisel does for a property promoter

Before creators and payments — the everyday usefulness that makes the platform worth listing on.

01 · VISIBILITY

African catalog, not a side shelf

Travelers browsing Isisel expect Dakar, Abidjan, Accra, Nairobi — not a random global feed. Your inventory is the product.

02 · OPERATIONS

Console for every apartment

Publish listings, manage open nights on the calendar, track reservations, create walk-in stays, and see who arrives today.

03 · HOSPITALITY

Requests + WhatsApp

Guests leave a phone number. You speak like a host, not a call center. Approvals stay intentional — useful when you manage many units.

04 · ECONOMICS

You set the night

Founding hosts keep the night while the catalog scales. Platform fees stay separate from any creator commission you choose to fund.

Talking line: “Isisel is the operating layer for African short stays — list, calendar, requests — then we layer growth tools on top.”

Make influencers work for a specific apartment

The promoter's growth product: turn creators into paid partners for one listing at a time — with rules you control from your host console.

01

Add a creator

Name, platform (Instagram, TikTok, YouTube...), profile URL. Invite them with a portal link.

02

Assign a stay

Attach them to one apartment with a unique promo code guests can enter when they book.

03

Set the money

Choose creator commission % and guest discount %. Both are yours to tune (up to 50%).

04

Pause anytime

Pause a code or a partnership when the push is done. Attribution stops; you stay in charge.

- ✓ **Commission you fund** — paid on attributed accommodation when their code converts. Separate from any Isisel platform fee.
- ✓ **Discount you choose** — give followers a reason to book that apartment now.
- ✓ **Motivation loop** — creators see codes, calendar availability, and earnings in their console, so they keep producing content for the stay you assigned.
- ✓ **Promoter visibility** — see active codes, attributed stays, booking value, and commissions from Host → Creators.
- ✓ **Stop when you want** — Pause / Resume on the code; archive or pause the partner when the campaign ends.

“You don’t hope an influencer posts. You give them a code, a cut, and a reason to keep filming that apartment.”

PRESENTER LINE · CREATORS

Money story: Guest books with code → stays → creator commission accrues after checkout. You only pay performance that filled the night — not vanity metrics.

Mobile Money is why Isisel exists

Global OTAs assume a foreign card. Most African travelers already pay with Mobile Money. Bridging that gap is the door to an intra-African short-term rental economy.

THE PROBLEM

Demand is local. Rails were not.

A guest in Abidjan or Accra who can pay Wave or MoMo should not be locked out of a Dakar apartment because the only checkout is a foreign card network.

THE BUILD

GeniusPay on Isisel

Payment integration for African Mobile Money (Wave, Orange Money, MTN MoMo, Moov) and cards — so settlement can follow how the continent already moves money.

THE EFFECT

Intra-African circulation

More African guests can book African stays. More nights fill. Promoters unlock a market that international platforms under-serve.

THE PRESENT

Human first, rails ready

Guests request stays and reach you on WhatsApp today. Online MoMo/card rails are built into the platform so checkout can open as you scale — without rebuilding payments later.

Close the pitch here: “Creators fill the feed. Mobile Money fills the wallet gap. Together they let African stays grow with African money.”

What to remember after the meeting

One page for the promoter's pocket. Low to high, same order you presented.

1 List & run stays on Isisel

African catalog + host console (listings, calendar, reservations, WhatsApp requests).

2 Grow with the influencer program

Assign creators to apartments → promo codes → set commission & discount → pause anytime → they keep creating because they earn.

3 Win on Mobile Money

The platform was built so African guests can pay the African way — unlocking intra-African short-term rental demand.

Let's put your units on Isisel.

WhatsApp

Creator commissions are set and funded by the host/promoter and are separate from Isisel platform fees. Commission applies to attributed accommodation when an active promo code converts. Guest discounts and creator rates are configured in Host → Creators. Mobile Money and card checkout run through GeniusPay integration; guest experience may use request + WhatsApp settlement while live online checkout is rolled out. © Isisel · www.isisel.com
